Are you a participant in the ENERGY STAR Homes program for residential new construction?

- ☐ yes ☐ no

### Attention D.C. Electric Consumers

To receive your rebate for purchases made between June 1, 2006 and May 31, 2007, you must mail your receipt and rebate form to:

DC Energy Office  
ENERGY STAR Rebate  
2000 14th Street NW, Ste. 300 East  
Washington DC, 20009

Rebate process takes 6 to 8 weeks to return.

Compared to a model manufactured before 1994, an ENERGY STAR qualified clothes washer can **save up to \$110 per year** on your utility bills.

ENERGY STAR qualified products save energy and help protect the environment. By choosing ENERGY STAR you are doing your part to conserve our natural resources for future generations.

Another energy efficient program brought to you by your ENERGY STAR partner:

## You May Be Eligible for an Energy Star Rebate!

If you purchased an Energy Star rated washing machine between June 1, 2006 and May 31, 2007, you can receive a \$150 rebate.

**Just fill out the detachable Mail-In Rebate form in this brochure and mail it with a copy of a dated appliance purchase sales receipt and your most recent electric bill to the DC Energy Office at the address listed on the Mail-In form.**

You must be a DC resident with an electric utility account to qualify. This rebate program is being operated by the DC Energy Office and funded by the Reliable Energy Trust Fund to encourage DC electric consumers to be energy efficient and lower their energy use. There is a rebate limit of one washing machine per household.

Look for the Energy Star label, developed by the US Environmental Protection Agency to help businesses and individuals protect the environment through superior energy efficiency. Energy Star appliances can save as much as 40% on

energy costs as sociated with them. With the help of the Energy Star program, Americans have saved \$12 billion on utility bills.

Through superior design and system features, ENERGY STAR qualified clothes washers clean clothes using 50% less energy than standard washers. The Modified Energy Factor (MEF) measures the energy used during the washing process, including machine energy, water heating energy, and dryer energy. The higher the MEF, the more efficient the clothes washer is.

Most full-sized ENERGY STAR qualified washers use 18-25 gallons of water per load, compared to the 40 gallons used by a standard machine. The Water Factor measures the gallons of water used per cycle per cubic foot (for example, a 3.0 cubic foot washer using 27 gallons per cycle has a water factor of 9.0). The lower the water factor, the less water the machine uses.

Most ENERGY STAR qualified washers extract more water from clothes during the spin cycle. This reduces the drying time and saves energy and wear and tear on your clothes.

ENERGY STAR qualified clothes washers are available in both top-loading and front-loading designs.
